make it automatic
with techromatic
a better way to do IT.

RPA for Personal Injury Attorneys

Leverage Robotic Process Automation(RPA) to eliminate bottlenecks and resolve cases faster!

P.I. LAW

What is Robotic Process Automation?

Robotic Process Automation (RPA) is customized software that replicates the highly repetitive and voluminous tasks in the Legal Services Industry. We use RPA to meet you where you are and integrate seamlessly across all software applications and legacy systems, online and offline, with or without human interaction.

Imagine a Personal Injury firm where Medical Records and bills are requested and retrieved automatically! Imagine seamlessly onboarding new clients, generating documents, submitting demand packages - all while saving your human resources for human stuff. Techromatic's TechroBots make that vision a reality!

Why Do I Need RPA for my Personal Injury Law Firm?

Whether your law firm has the most billboards on the highway or operates as a small boutique practice, one thing is likely: managing medical record/bill requests, retrievals, and follow-ups is a major bottleneck. This process not only consumes valuable human resources but also delays case resolution.

We design custom software robots tailored to your firm's environment, automating repetitive, high-volume/time consuming tasks. From intake and onboarding to handling the Medical Records/Bill Request and Retrieval Process, and helping with lien resolution and demand packages - our TechroBots can streamline whatever your firm needs most. Plus, our bots never get sick or take vacations!

Direct Benefits

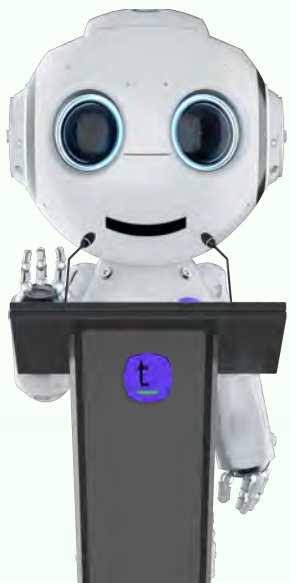

Increased Productivity
Increase Case Resoltuion Speed

Increased Efficiency
Medical Record Request And Retreival Around The Clock

Increased Accuracy
Eliminate Expensive Errors

Increased Scalability
Bots Can Take On Any Workload

Cost Savings
All of these lead to cost savings!

Indirect Benefits

Happier and More Engaged Employees

Provide an Impeccable Client Experience

Increase Compliance and Auditing Capabilities

How Can Personal Injury Law Firms use Robots?

Medical Record/Billing Request

Let the robots create and send HIPAA/HITECH forms, and follow-up with providers

Record Retrieval

When the records are ready - let the bots retrieve them, download and save to your system

Client Intake and Onboarding

Bots can help open new files, generate letters of representation, send welcome packages and more

Lien Reconciliation and Negotiation

Let the robots handle the standardized parts of the process and save the lawyers for legal work

Demand Package Construction

This time consuming process needs your expertise - but the bots can get it started for you!

Let's take a look a the Medical Record Request and Retrieval Process - Pre and Post Robot:

Pre Robot **Human** Process
Humans Handle the Whole Cycle

New **Human** / **Robot** Process
Human are free for higher-value tasks

Scan Me and Save a Tree!

Let's continue the conversation!
