RPA for Law Firms

Leverage Robotic Process Automation (RPA) to reduce busy work for your paralegals and associates, save money and grow your law practice!

What is Robotic Process Automation?

Robotic Process Automation (RPA) is customized software that replicates the complicated workflows of the legal services industry. RPA integrates seamlessly across all software applications and legacy systems, online and offline, with or without human interaction.

Imagine paralegals and support staff working at their peak on legal analysis, client advocacy, relationship building and growing the firm; while robots complete the tedious, repetitive busy work. Techromatic's Paralegal Robots make that vision a reality!

Why Do I Need RPA for My Law Firm?

Research shows that paralegals rank comparatively low on the scale of job satisfaction. In addition to feeling a reduced sense of meaning at work, most paralegals feel as if they are not being utilized to their highest potential. And we all know why - between file management, data entry, scheduling, document preparation, and client communications, there's just too much busy work.

Our customized paralegal robots will take on your grunt work – logging into applications, filling out forms, copying and pasting, uploading or downloading files, generating, reading and processing documents, scraping data from the web, transferring data from one application to another, creating emails, building reports, reconciling finances and more.

Direct Benefits

Increased Productivity
Hours Of Work Reduced To Minutes

Increased Efficiency
Document And File Management Around The Clock

Increased Accuracy
Eliminate Expensive Errors

Increased Scalability
Take On More Clients Without More Paralegals

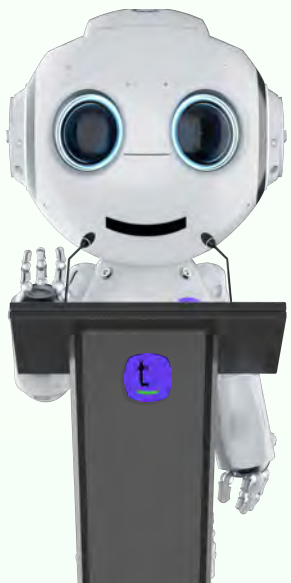

Cost Savings
All of these lead to cost savings

Indirect Benefits

Happier and More Engaged Paralegals

Provide an Impeccable Client Experience

Close the Revolving Door on Legal Support Staff

How Can Law Firms Use Robots?

Estate Planning and Probate
Automate new matter intake, document generation, e-filing, probate file management

Real Estate
Bots can open new closing files from deal sheets, coordinate closings, generate contracts, create and email closing binders

Patent Law
Client intake, applications, e-filing, client communications, file management can be done behind the scenes

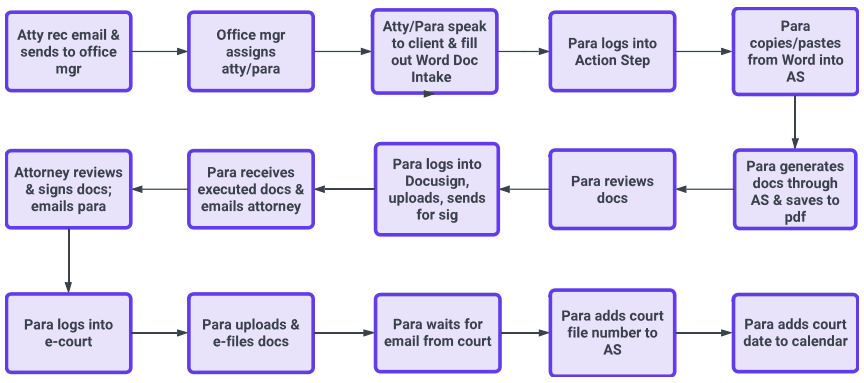

Litigation
Intelligent document processing will make discovery a breeze

Personal Injury
Let robots handle the medical records requests and retrieval process and shorten your case resolution timeline

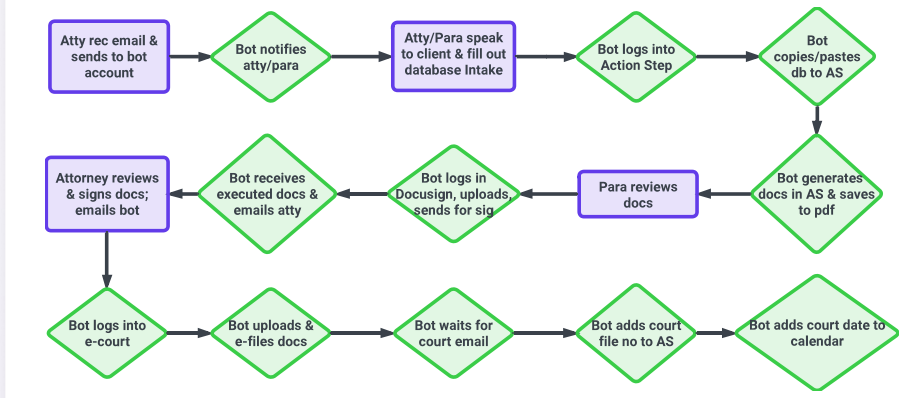

What if my law firm does not practice the above services?

Most law firms have areas where rules-based, repetitive tasks slow down the operations of the firm and inhibit growth. We can automate those processes.

Probate Robot: From Intake to Filing in about 8 minutes

The Human Process **(4+ hours)**

The Bot/Human Process **(8 minutes)**

Elevate Your Law Firm Above Your Competitors!
